

# FINANCIAL SERVICE DATA PROTECTION STARTS IN THE DATA CENTER

## Protect Your Data Assets With Data Canopy

When milliseconds matter and regulations tighten, you cannot take shortcuts in your IT infrastructure. As a financial service provider, you must connect how you need to, where you need to, often with just the right mix of colocation, private cloud, and public cloud to meet a myriad of requirements. Our data center experts help you strategize and optimize to keep pace with your compliance and clients' needs.

### Data Canopy Offers:

- Colocation from Tier III data center facilities nationwide
- Private cloud (VPS)
- Public and multi-cloud connectivity
- Storage and backups
- Disaster Recovery as a Service (DRaaS)
- Security as a Service (SECaaS)

### Disaster Recovery for Financial Organizations

Downtime is the enemy for all organizations, but as a financial service provider you must be extra vigilant to protect your client's interests and stay ahead of competitors and the market. Data Canopy's experts will work with you and your team to find the best price and data center facility for your disaster recovery solutions and ensure your entire infrastructure has the security and guaranteed uptime you require.

### Calculated Hybrid Infrastructure

Managing your IT infrastructure can be a juggling act to handle ever-expanding regulations and mission critical and nonessential data sets. A hybrid approach is often the right approach when compliance, performance, and efficiency requirements meet. Data Canopy offers colocation in Tier III enhanced, PCI compliant data centers nationwide alongside private cloud offerings and direct connections to public cloud vendors to meet all of your data hosting needs.

- Connect securely to public cloud providers, including AWS and Azure, at reduced cost
- Ensure continual infrastructure improvement to stay ahead of changing industry and regulatory demands

The right cloud strategy can help you to keep that data in the right hands.

## Hybrid Infrastructure for Financial Service Organization

Data Canopy works to reduce the cost and complexity of hybrid and multi-cloud environments by connecting, storing, and securing physical and virtual infrastructure under one invoice.
